

## BAND V2

Before using your BAND V2s, make sure they are fully charged and all users are assigned to each device before distribution. Once each user has a BAND V2, make sure they're wearing it properly—on the upper arm, in the area between the bicep and triceps. The elastic strap should be adjusted for a snug fit.

## MULTI-CHARGER V2

Your MULTI-CHARGER V2s can be linked for convenient charging. Cords are located in the miscellaneous pocket in the kit case. When BAND V2s are charging, they will light up with blue LEDs. Once fully charged, the LED on the device will turn magenta.
