Case Study: US Army uses SlateSafety at Best Sapper Competition

Background

Each year, the U.S. Army brings together the very best of the elite combat engineers, known as Sappers, to a single location for a multi-day competition of technical proficiency, mental agility, and physical endurance.

Double Click

SlateSafety BAND V2s are already in use to protect soldiers during training at several military bases, where wearable technology has become a seamless part of the standard operating procedure to decrease heat stress and overexertion injuries by over 90%.

Key Outcome

0 Heat-related Incidents
While wearing the SlateSafety system.

> "We're grateful our technology was incorporated into the competition this year and we're proud to be able to provide an extra layer of safety through such a physically rigorous competition."
>
> -Zack Braun
> CEO SlateSafety
