

# Case Study: Central Plateau Cleanup Company (CPCCo)

## Background

Based in Richland, Washington, CPCCo recognized the need to enhance their safety measures. They previously tested chest-worn monitors for real-time health tracking, but these proved cumbersome and not user-friendly for those working in the field.

## Double Click

Implementing SlateSafety's BAND V2 for physiological monitoring, allows comfortable, real-time monitoring of heart rate and core body temperature. The early warning system, protects against heat stress, by notifying workers and safety personnel when action is needed.

## Key Outcome

0 Heat-related incidents  
While implementing the SlateSafety system.

“Heat mitigation was critical at the Hanford Site, where temperatures often exceeded 90 degrees in summer.”

-Stan Branch, EM Safety and Health Division Director
